

Input

- The input of our problem would consist of the following parts;
 1. A weighted directed graph of indeterminate size.
 2. A text file with the preferred starting node.

NP-Completeness

- Certification process can be done in polynomial time
 - Given a graph G and a path P within G , iterate over all edges within the path and sum up the edge weights (this is $\Theta(n)$, where n is the number of edges along the path).
 - Then, simply evaluate whether or not the sum equals L (constant time).

Let $P = A \rightarrow D \rightarrow E$
Let $L = 9$

1. Sum weights of all edges:

$A \rightarrow D = 6$
 $D \rightarrow E = 2$
Total = 8

2. Does Total = L ?

No. $8 \neq 9$

NP-Completeness

- Reduction from Hamiltonian Path problem:
 -
